

ERIKS high purity components

ERIKS high purity programme

Driven by a greater care for people's health and the environment plant owners in the pharmaceutical, biotechnology and food industries are focusing increasingly on the control of their production processes.

Seals are of great importance as they are essential for the separation of the production media and the outside world. There is also an increasing concern for any additives in traditional sealing materials that could potentially migrate into the production system and cause contamination of the media.

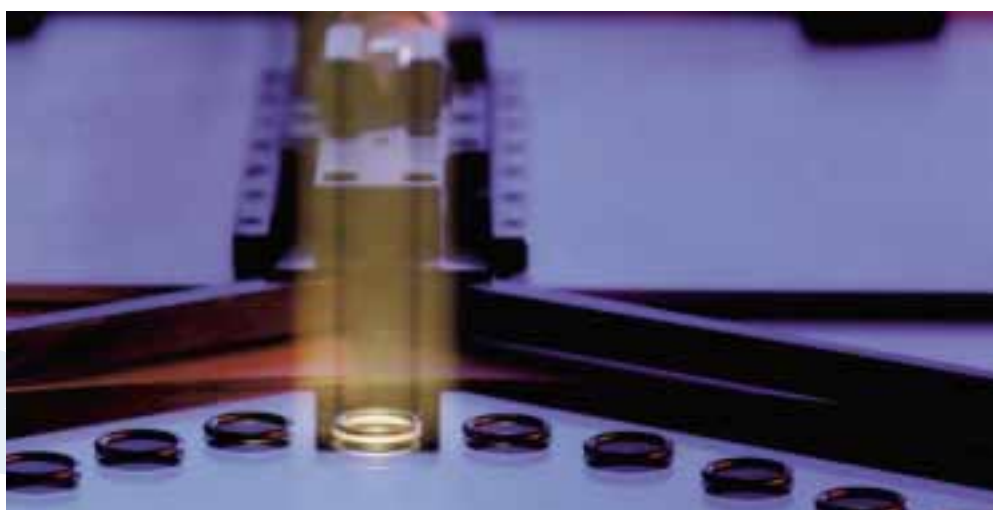

Already in 1998 ERIKS started a broad scientific research on seals for high purity applications. In close collaboration with independent research centres in both Europe and the USA and with the assistance of leading seals manufacturers like DuPont Dow Elastomers, ERIKS developed a full range of 'high purity' seals and sealing components. These products are designed to offer plant operators the highest level of process safety and reliability. Together with these products ERIKS readily offers specialized technical support to seals users.

Delivery programme

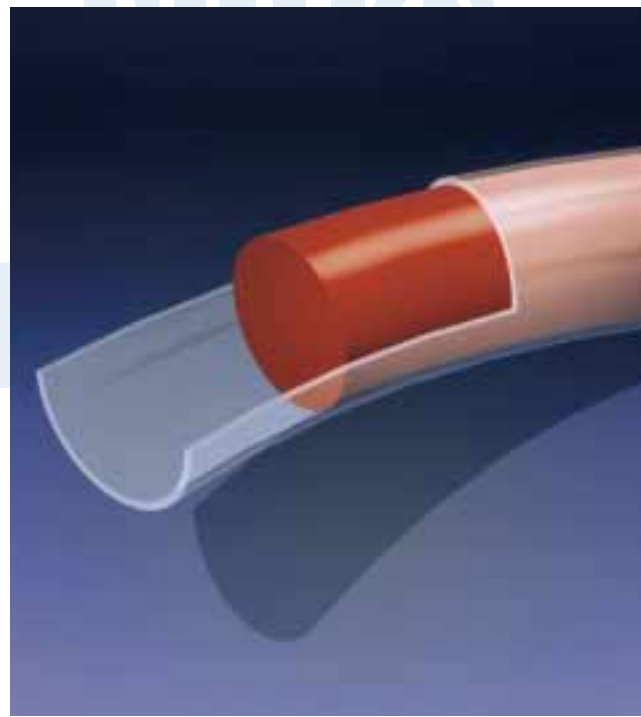

O-rings

ERIKS has introduced a range of compounds which are in conformance with the norms for contact with food and pharmaceuticals. ERIKS also produces a range of FDA conform O-rings up to diameter 5000 mm in as much as 30 different compounds.

Teflex O-rings

By using high performance products from DuPont Dow Elastomers we are able to offer Teflex encapsulated O-rings, which are of the highest purity and possess an optimal chemical resistance.

Dynamic seals

ERIKS also offers a comprehensive range of FDA conform oil seals, V-rings, hydraulic seals, rubber profiles or mouldings. In addition ERIKS is a specialist in braided packings and mechanical seals including revision services.

Lipseals

Eriseals

Mechanical seals

V-seals

Hydraulic seals

Fluid Components

Rubber Mouldings

Industrial hoses

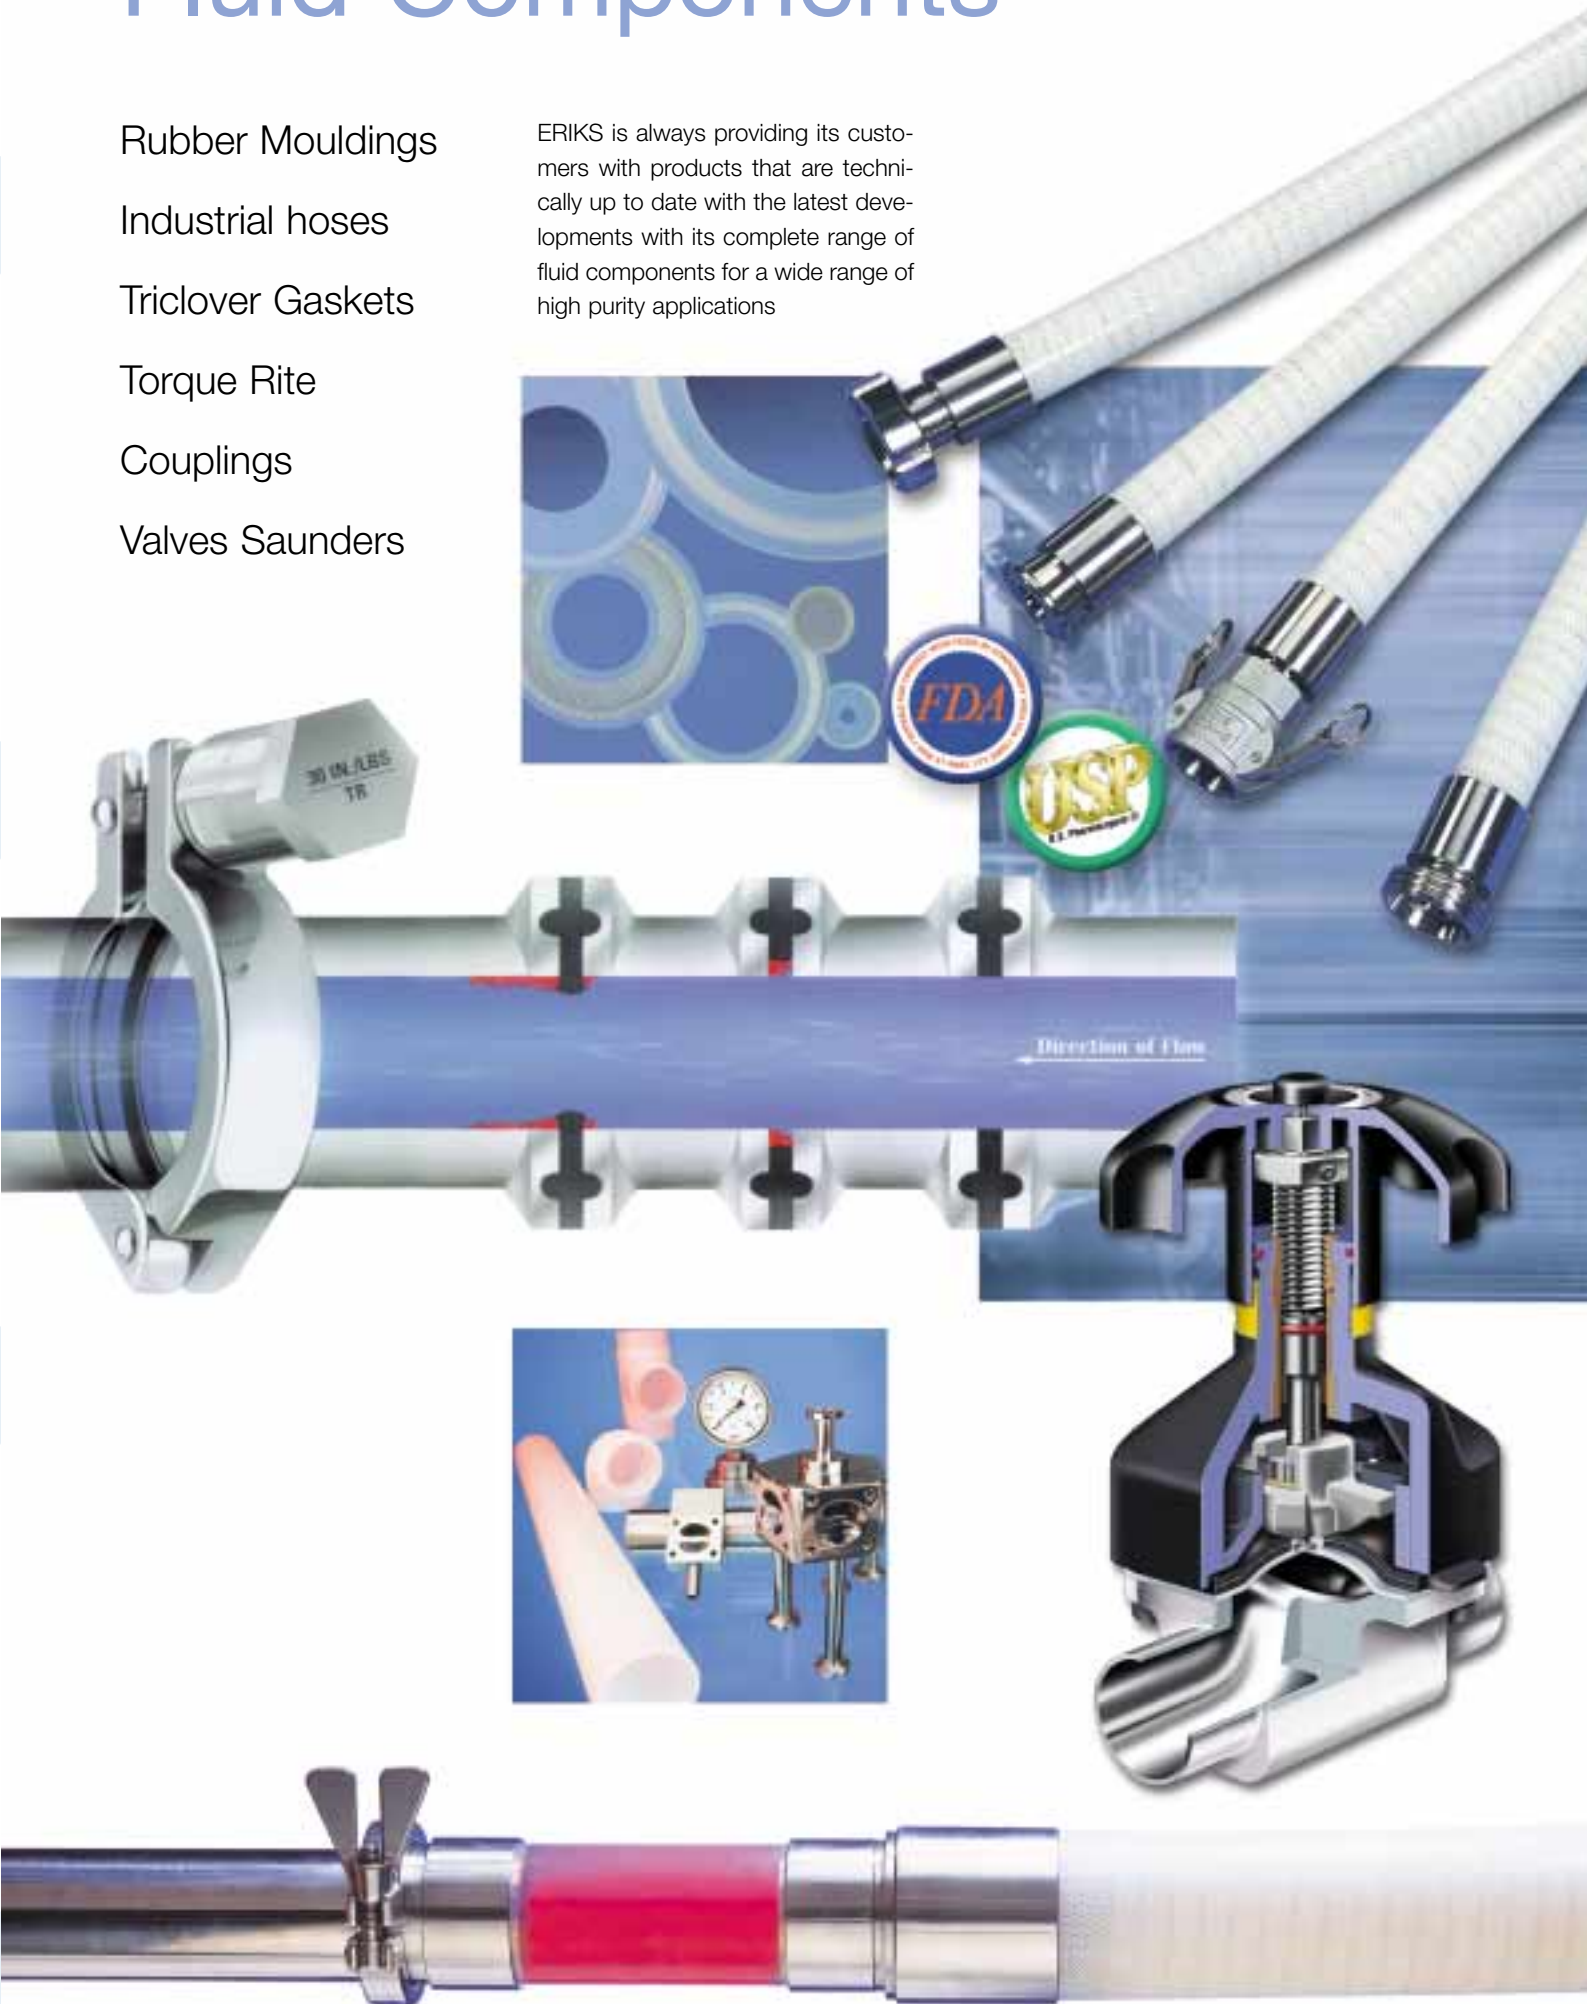

Triclover Gaskets

Torque Rite

Couplings

Valves Saunders

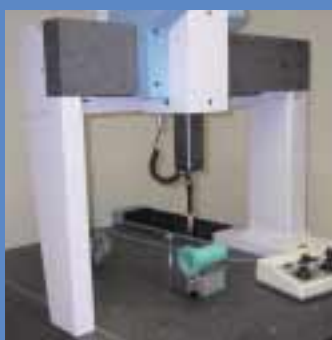

ERIKS is always providing its customers with products that are technically up to date with the latest developments with its complete range of fluid components for a wide range of high purity applications

Plastics Components

Engineered parts

High Purity plastics for many industrial applications are available from specialized manufacturers with renowned brands.

Service

for our seals

ERIKS offers an extensive service in this field. Contact us for more info:

FDA or USP labeling

Cytotoxicity tests for
USP compounds

Treatment with dionised water

Extra post-curing

Criti pack in 100 % clean room
for USP products

Certificates

Quality assurance of
your compound

Batch and cure date numbers

Seminars
